information technology, academic tasks

Abstract

The purposes of this research were to study, and to compare, the need of using information technology on academic tasks of teachers in Songvithaya School, Samutprakan Province, under the office of the Private Education Commission. The 5 rating scale questionnaires were used for collecting data from all 60 teachers of Songwithaya School. Data were analyzed in percentage, mean, standard deviation and t-test.

The result of this study revealed that the teachers strongly need to use information technology on their academic task as a whole, and in every academic task aspects: technology and innovation task, instructional task, supervision task, and measurement and evaluation task. The teachers who differed in gender, age, educational level, training experience had no difference in the need of using information technology on academic task as a whole and in every aspect.
